SERVICE LETTER #35

TO: All Champion Distributors, Dealers and Owners

SUBJECT: Installation Approval of Fiberglass Wing Tips on all 7AC,
7BCM, 7CCM, 7DC, 7EC, and 7FC.

We have received approval for the installation of fiberglass wing tips on the above mentioned aircraft. A kit is available for the conversion to fiberglass tips for the owners of Champion Aircraft prior to the following Serial Number 7EC-685 and 7FC-285 and all other above models.

The complete conversion on one aircraft will be approximately 7 man hours of labor.

Kit 196 is available through authorized Champion Dealers, or the factory.

Installation of the kit reduces the wing tip area, and automatically equips the plane with the new wing tip air foil section. This materially improves the stall characteristics, aileron control, and ground handling in high winds. Less hangar storage area is needed, and the tips are much less susceptible to hangar damage. A slight increase in cruising speed is usually achieved, as well as an improved appearance due to the modern square tip.

The kit is F.A.A. and Champion factory approved, and its installation may be accomplished with relative ease due to the complete blueprints and parts supplied.

A placard 1-9177 restriction spins is required on Models 7AC, 7BCM, 7CCM and 7DC.
